THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Brett Valiquet (reg. 27,841) on August 25th, 2010.

The application has been amended as follows:

42. (currently amended) A method for controlling material flow in production of a product comprised of a plurality of individual mechanical or electronic assembly components as parts or part aggregates for assembly into said product, comprising the steps of:

producing said individual parts or part aggregates at a supplier production site;
recording production and delivery data regarding the individual parts or part aggregates, and in addition to said production and delivery data also recording quality data comprising at least one tolerance value range regarding the individual mechanical or electronic assembly components as said parts or part aggregates;

storing said production and delivery data and said quality data in an individual transponder physically connected to each individual part or individual part aggregate;

delivering said individual parts or part aggregates to a goods receipt of a logistic system;
reading said production and delivery data from the transponder at said goods receipt and using the data for controlling further material flow such that the individual parts or part

Art Unit: 2121

aggregates are transported in a controlled manner to predetermined, subsequent assembly process stations at an assembly production site for said product;

before storage, reading and checking said quality data comprising said at least one tolerance value range at a quality check station of said assembly production site and if the quality check yields that said mechanical or electronic assembly components as said delivered parts or part aggregates lie outside of the at least one tolerance value range, ~~rejection and return is automatically activated;~~ then at said quality check station storing in the transponder a deviation data indicating an extent of deviation outside of said tolerance value range and automatically activating a rejection and return to said supplier production site of said outside tolerance range components with the corresponding transponder containing the deviation data;

taking in the individual parts by an assembly production site operator and storing them in an assembly production site storage until they are required for assembly to create said product;

detecting with a transponder reader a removal of an individual part or part aggregate from said assembly production site storage for its assembly to produce said product, and only triggering a payment obligation for the assembly production site operator upon said transponder reader detected removal of the individual part or part aggregates from the assembly production site storage to produce said product; and

assembling said product from said electronic or mechanical assembly components.

55. (currently amended) A system for controlling material flow in production of a product comprised of a plurality of individual mechanical or electronic assembly components as parts or part aggregates for assembly into said product, comprising:

Art Unit: 2121

an individual transponder physically connected to each individual part or individual part aggregate, said transponder having stored therein production and delivery data regarding the individual part or part aggregate and in addition having stored therein quality data comprising at least one tolerance value range regarding the individual mechanical or electronic assembly component as said part or part aggregate;

a read system which reads said production and delivery data from the transponder at a goods receipt and which for controls further material flow such that the individual parts or part aggregates are transported in a controlled manner to predetermined, subsequent assembly process stations at an assembly production site for said product, and before storage said read system reading and checking said quality data comprising said at least one tolerance value range at a quality check station of said assembly production site for said product and if the quality check yields that said mechanical or electronic assembly components as said delivered parts or part aggregates lie outside of the at least one tolerance value range, ~~rejection and return is automatically activated;~~ then at said quality check station storing in the transponder a deviation data indicating an extent of deviation outside of said tolerance value range and automatically activating a rejection and return to said supplier production site of said outside tolerance range components with the corresponding transponder containing the deviation data;

a storage for taking in the individual parts or part aggregates at the production site until they are required for assembly to create said product; and

a detection system for detecting with a transponder reader a removal of an individual part or part aggregate from said assembly production site storage for its assembly to produce said product, said detection system being utilized to only trigger a payment obligation for an

Art Unit: 2121

assembly production site operator upon said transponder reader detected removal of the individual part or part aggregate from the assembly production site storage to produce said product.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments regarding Statement of Reason for Allowance".

3. Dependent claims 43 – 49, 51 – 54, 57 – 60 are allowed as they depend upon an allowable independent claim(s).
